# Refining Margins

- Calculation of Saras refining margins based on management accounting has been dropped
- A formula based on IFRS accounting principles has been adopted in order to make results more easily verifiable
- Saras refining margin is now calculated as follows:

**SARAS REFINING MARGIN = SARAS REFINERY MARGIN + SARLUX IGCC MARGIN**

**SARAS REFINERY MARGIN** = [Comparable LIFO EBITDA + Fixed Costs] / Refinery Crude Runs

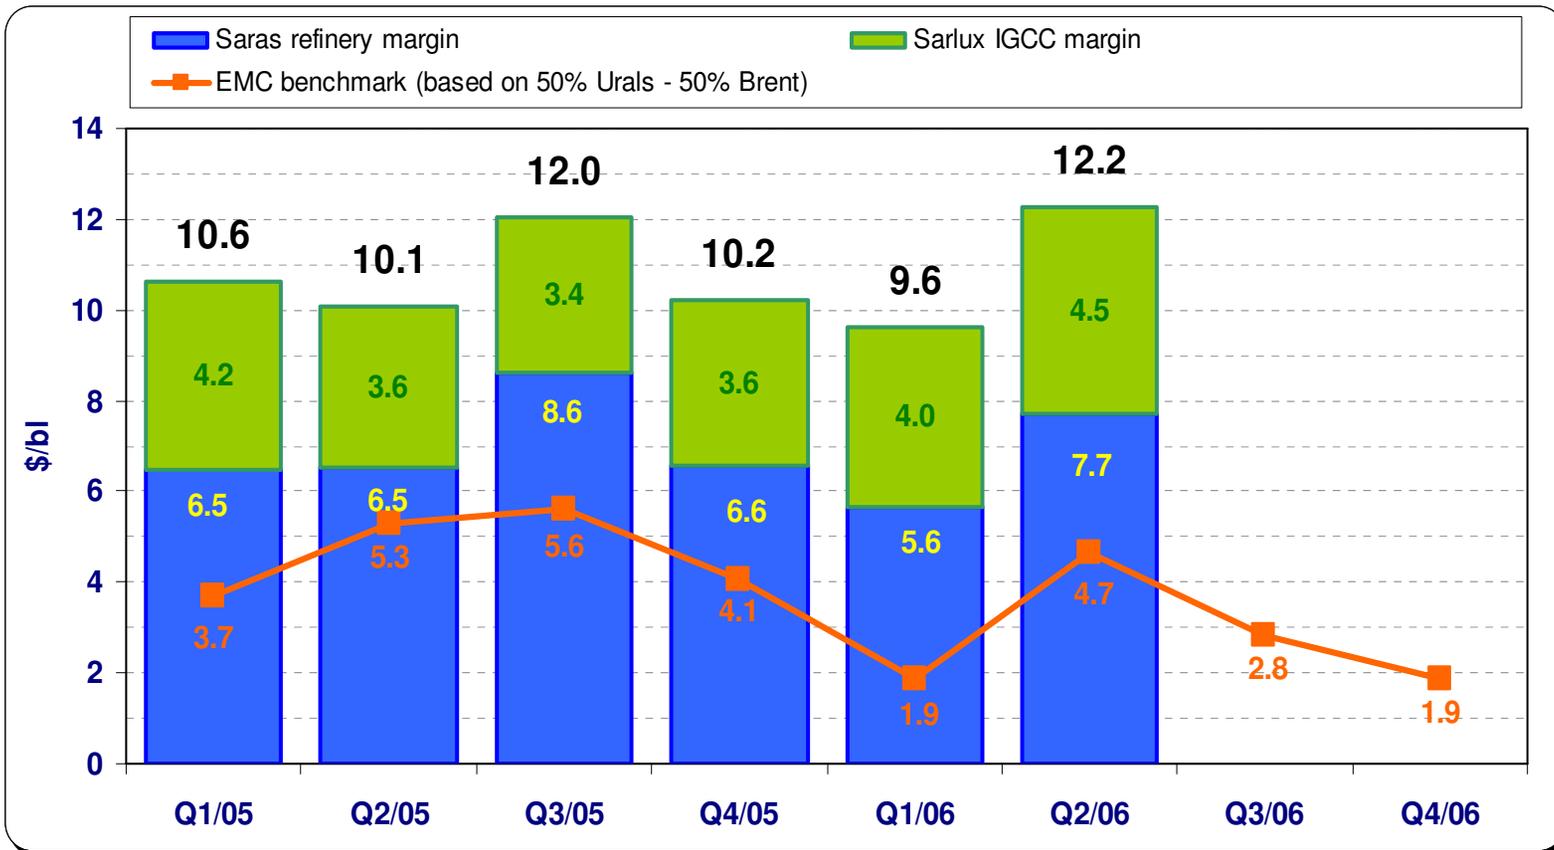

**SARLUX IGCC MARGIN** = [EBITDA + Fixed Costs] / Refinery Crude Runs

*All revenues and costs for IGCC margin are linearised as per IFRS accounting principles*

- Saras refining margin will be compared to the EMC\* benchmark refining margin (based on 50% Ural and 50% Brent) on a quarterly basis.
- The benchmark is a customized margin calculated for Saras by EMC and it represents Saras' typical crude slate, pricing structure and reference market.
- The yields and variable costs used in the calculation are EMC's estimates for a complex refinery in the MED region.
- EMC benchmark to be published on our website [www.saras.it](http://www.saras.it) and updated on a weekly basis

\* EMC (Energy Market Consultants) is based in London and was founded in 1989 by a group of dedicated consultants with extensive experience in their respective fields. Since then the company has established a reputation for high quality original research and a genuinely independent perspective on the oil/energy markets and industries.
